Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-37, 55-75, and 77-79, drawn to a first method, of transforming a host cell comprising introducing into said cell a nucleic acid molecule encoding a protein having at least one chromo domain, a helicase domain and a DNA binding domain; and a first product, a recombinant nucleic acid molecule comprising said nucleic acid molecule operably linked to a foreign promoter.

Group II, claim(s) 38-54 and 76, drawn to a second method, of transforming any host cell, comprising introducing into said cell an antisense DNA or RNA molecule comprising a nucleotide sequence complementary to a length of nucleotides within a nucleic acid molecule encoding a protein having at least one chromo domain, a helicase domain and a DNA binding domain; and a second product, a transgenic plant comprising said antisense DNA or RNA molecule.

Group III, claim(s) 80-83, drawn to a third product, a recombinant protein comprising a protein having an amino acid sequence having at least 50% identity to the amino acid sequence of SEQ ID NO: 2; and a third method, of producing a PKL protein.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of Group I is the introduction of nucleic acid molecule encoding a protein having at least one chromo domain, a helicase domain and a DNA binding domain into a host cell. This is not shared with the method of Group II, which involves the introduction of an antisense DNA or RNA molecule into a host cell. The nucleic acid molecule of Group I and the antisense molecule of Group II have different sequences, and therefore do not share the same structure. The nucleic acid molecule of Group I is not shared with Group III, as they do not encode the proteins encompassed by Group III.

A telephone call was made to Donna Ferber on September 15, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
